Kripke model

A Kripke model of $\mathfrak{L}_M$ is a triple $\langle W, R, V\rangle$ consisting of

- a non-empty set W,
- a binary relation R on W, and
- a function V that assigns to each sentence letter of $\mathfrak{L}_M$ a subset of W.

Kripke semantics

$\Box A$ is true at w iff A is true at all worlds accessible from w.

$\Diamond A$ is true at w iff A is true at some world accessible from w.

Review

K-valid

A sentence is K-valid iff it is true at all worlds in all Kripke models.

S5-valid

A sentence is S5-valid iff it is true at all worlds in all basic models.

Review

Schema		S5	K
(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓
(T)	$\Box A \to A$	✓	—
(D)	$\Box A \to \Diamond A$	✓	—
(B)	$A \to \Box\Diamond A$	✓	—
(4)	$\Box A \to \Box\Box A$	✓	—
(5)	$\Diamond A \to \Box\Diamond A$	✓	—
(G)	$\Diamond\Box A \to \Box\Diamond A$	✓	—

The system T

The system T

Let $\Box p$ mean 'you know that p'.

Which of these are valid?

- $\Box p \rightarrow p$
- $\Box p \rightarrow \Diamond p$
- $p \rightarrow \Box\Diamond p$

Suppose you falsely believe $\neg p$.

- p is true.
- You believe that you know $\neg p$.
- You don't believe that you don't know $\neg p$.
- You don't know that you don't know $\neg p$.
- $\Box\neg\Box\neg p$ is false.
- $\Box\Diamond p$ is false.

The system T

We want a logic of knowledge with (K), (T), and (D), but not (B).

	Schema	S5	K
(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓
(T)	$\Box A \to A$	✓	—

(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓	✓

Kripke model

A Kripke model of $\mathfrak{L}_M$ is a triple $\langle W, R, V\rangle$ consisting of

- a non-empty set W,
- a binary relation R on W, and
- a function V that assigns to each sentence letter of $\mathfrak{L}_M$ and each element of W a truth-value.

wRv iff v is possible relative to w.

wRv iff v is compatible with your knowledge at w.

The system T

Whatever you know at a world is true at that world.

So every world is compatible with your knowledge at that world.

So every world is accessible from itself.

The system T

Whatever you know at a world is true at that world.

So every world w is compatible with your knowledge at w.

So every world is accessible from itself.

The system T

Definition: K-valid

A sentence A is **K-valid** (for short, $\models_K A$) iff A is true at every world in every Kripke model.

Definition: T-valid

A sentence A is **T-valid** (for short, $\models_T A$) iff A is true at every world in every Kripke model in which each world has access to itself.

The set of all T-valid sentences is **system T**.

The system T

Schema		S5	K	T
(K)	$\Box(A \rightarrow B) \rightarrow (\Box A \rightarrow \Box B)$	✓	✓	✓
(T)	$\Box A \rightarrow A$	✓	—	✓
(D)	$\Box A \rightarrow \Diamond A$	✓	—	✓
(B)	$A \rightarrow \Box\Diamond A$	✓	—	—
(4)	$\Box A \rightarrow \Box\Box A$	✓	—	—
(5)	$\Diamond A \rightarrow \Box\Diamond A$	✓	—	—
(G)	$\Diamond\Box A \rightarrow \Box\Diamond A$	✓	—	—

New tree rule for system T:

$$\begin{array}{c} \vdots \\ \omega R \omega \end{array}$$

$\uparrow$

old

The system T

Target sentence: $\Box p \rightarrow p$

1.	$\neg(\Box p \rightarrow p)$	(w)	(Ass.)
2.	$\Box p$	(w)	(1)
3.	$\neg p$	(w)	(1)

The system T

Target sentence: $\Box p \to p$

1.	$\neg(\Box p \to p)$	(w)	(Ass.)
2.	$\Box p$	(w)	(1)
3.	$\neg p$	(w)	(1)
4.	wRw		(Ref.)
5.	p	(w)	(2,4)
	x		

The system S4

The system S4

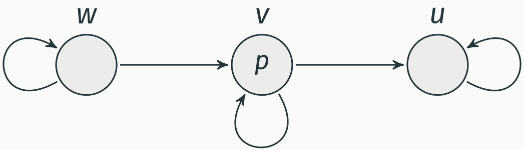
Let $\Box p$ mean ‘you know that p’.

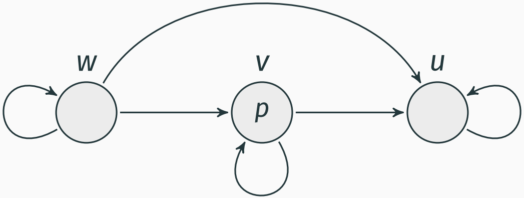
- $\Box p \to p$ is plausibly valid.
- $\Box p \to \Diamond p$ is plausibly valid.
- $p \to \Box\Diamond p$ is not.
- What about $\Box p \to \Box\Box p$?

The system S4

Schema		S5	K	T	S4
(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓	✓	✓
(T)	$\Box A \to A$	✓	—	✓	✓
(D)	$\Box A \to \Diamond A$	✓	—	✓	✓
(B)	$A \to \Box\Diamond A$	✓	—	—	—
(4)	$\Box A \to \Box\Box A$	✓	—	—	✓
(5)	$\Diamond A \to \Box\Diamond A$	✓	—	—	—
(G)	$\Diamond\Box A \to \Box\Diamond A$	✓	—	—	—

The system S4





Is $\Box p \to \Box\Box p$ true at w?

The dual of $\Box A \to \Box\Box A$ is ...$\Diamond\Diamond A \to \Diamond A$.

Definition: S4-valid

A sentence A is **S4-valid** (for short, $\models_{S4} A$) iff A is true at every world in every Kripke model in which

(a) each world has access to itself, and

(b) if a world w has access to some world v, and v has access to a world u, then w has access to u.

The set of all S4-valid sentences is **system S4**.

The system S4

Schema		S5	K	T	S4

7.	$\neg A$	(u)	(5)
8.	wRu		(4,6,Tr.)
5.	A	(u)	(2,8)
	×		

Further systems

Further systems

A relation R on a set W is called **reflexive** if every member of W is R-related to itself.

Definition: T-valid

A sentence A is **T-valid** (for short, $\models_T A$) iff A is true at every world in every Kripke model in which each world has access to itself.

Definition: T-valid

A sentence A is **T-valid** (for short, $\models_T A$) iff A is true at every world in every Kripke model with a reflexive accessibility relation.

A relation R on a set W is called **transitive** if whenever wRv and vRu, then wRu.

Definition: S4-valid

A sentence A is **S4-valid** (for short, $\vDash_{S4} A$) iff A is true at every world in every Kripke model in which

(a) each world has access to itself, and

(b) if a world w has access to some world v, and v has access to a world u, then w has access to u.

Definition: S4-valid

A sentence A is **S4-valid** (for short, $\vDash_{S4} A$) iff A is true at every world in every Kripke model whose accessibility relation is reflexive and transitive.

Further systems

Definition: K4-valid

A sentence A is **K4-valid** (for short, $\models_{K4} A$) iff A is true at every world in every Kripke model whose accessibility relation is transitive.

Further systems

Schema		S5	K	T	S4	K4
(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓	✓	✓	✓
(T)	$\Box A \to A$	✓	—	✓	✓	—
(D)	$\Box A \to \Diamond A$	✓	—	✓	✓	—
(B)	$A \to \Box\Diamond A$	✓	—	—	—	—
(4)	$\Box A \to \Box\Box A$	✓	—	—	✓	✓
(5)	$\Diamond A \to \Box\Diamond A$	✓	—	—	—	—
(G)	$\Diamond\Box A \to \Box\Diamond A$	✓	—	—	—	—

Further systems

Can you think of a requirement on the accessibility relation that makes $\Box A \to \Diamond A$ valid?

A relation R on a set W is called **serial** if every member of W is R-related to some member of W. ("No dead ends")

Definition: D-valid

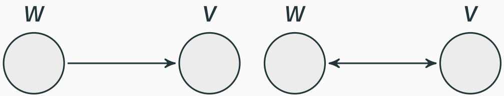
A sentence A is **D-valid** (for short, $\models_D A$) iff A is true at every world in every Kripke model whose accessibility relation is serial.

Further systems

Schema		S5	K	T	S4	K4	D
(K)	$\Box(A \rightarrow B) \rightarrow (\Box A \rightarrow \Box B)$	✓	✓	✓	✓	✓	✓
(T)	$\Box A \rightarrow A$	✓	—	✓	✓	—	—
(D)	$\Box A \rightarrow \Diamond A$	✓	—	✓	✓	—	✓
(B)	$A \rightarrow \Box\Diamond A$	✓	—	—	—	—	—
(4)	$\Box A \rightarrow \Box\Box A$	✓	—	—	✓	✓	—
(5)	$\Diamond A \rightarrow \Box\Diamond A$	✓	—	—	—	—	—
(G)	$\Diamond\Box A \rightarrow \Box\Diamond A$	✓	—	—	—	—	—

Further systems

A relation R on a set W is called **symmetric** if whenever wRv then vRw.



Further systems

A relation R on a set W is called **symmetric** if whenever wRv then vRw.

Definition: B-valid

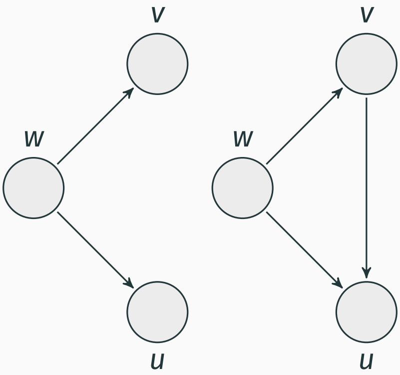
A sentence A is **B-valid** (for short, $\models_B A$) iff A is true at every world in every Kripke model whose accessibility relation is reflexive and symmetric.

Further systems

Schema		S5	K	T	S4	K4	D	B
(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓	✓	✓	✓	✓	✓
(T)	$\Box A \to A$	✓	—	✓	✓	—	—	✓
(D)	$\Box A \to \Diamond A$	✓	—	✓	✓	—	✓	✓
(B)	$A \to \Box\Diamond A$	✓	—	—	—	—	—	✓
(4)	$\Box A \to \Box\Box A$	✓	—	—	✓	✓	—	—
(5)	$\Diamond A \to \Box\Diamond A$	✓	—	—	—	—	—	—
(G)	$\Diamond\Box A \to \Box\Diamond A$	✓	—	—	—	—	—	—

Further systems

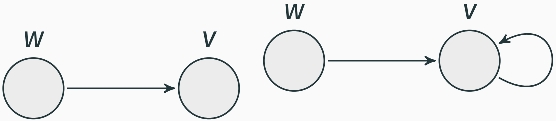
A relation R on a set W is called **euclidean** if whenever wRv and wRu, then vRu.



Further systems

A relation R is called **euclidean** if whenever wRv and wRu, then vRu.

Note: w, v, and u need not be distinct worlds! $\forall x \forall y \forall z (xRy \land xRz \rightarrow yRz)$.



Further systems

A relation R on a set W is called **euclidean** if whenever wRv and wRu, then vRu.

Definition

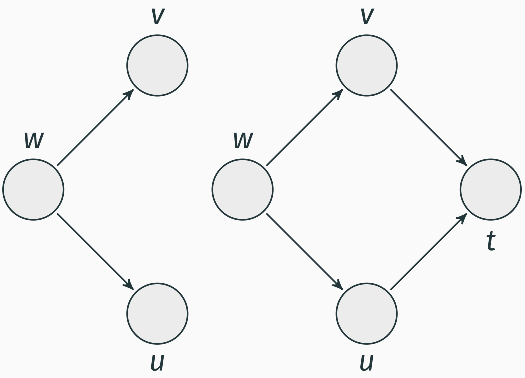
A sentence A is **K45-valid** (for short, $\vDash_{K45} A$) iff A is true at every world in every Kripke model whose accessibility relation is transitive and euclidean.

Further systems

Schema		S5	K	T	S4	K4	D	B	K45
(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓	✓	✓	✓	✓	✓	✓
(T)	$\Box A \to A$	✓	—	✓	✓	—	—	✓	—
(D)	$\Box A \to \Diamond A$	✓	—	✓	✓	—	✓	✓	—
(B)	$A \to \Box\Diamond A$	✓	—	—	—	—	—	✓	—
(4)	$\Box A \to \Box\Box A$	✓	—	—	✓	✓	—	—	✓
(5)	$\Diamond A \to \Box\Diamond A$	✓	—	—	—	—	—	—	✓
(G)	$\Diamond\Box A \to \Box\Diamond A$	✓	—	—	—	—	—	—	—

Further systems

A relation R on a set W is called **convergent** if whenever wRv and wRu, then there is some t such that wRt and vRt.



Further systems

A relation R on a set W is called **convergent** if whenever wRv and wRu, then there is some t such that wRt and vRt.

Definition

A sentence A is **S4.2-valid** (for short, $\models_{S4.2} A$) iff A is true at every world in every Kripke model whose accessibility relation is reflexive, transitive, and convergent.

Further systems

Schema		S5	K	T	S4	K4	D	B	K45	S4.2
(K)	$\Box(A \to B) \to (\Box A \to \Box B)$	✓	✓	✓	✓	✓	✓	✓	✓	✓
