

## Correction to: Discourse, Diversity, and Free Choice

Wolfgang Schwarz, 18 November 2023

On page 62 of the published version, I say that the double exhaustification account “has trouble in accounting for free choice effects in cases like (41), with more than two disjuncts”. I attribute this observation to Franke (2011). Both the statement and the attribution are incorrect. One can easily derive the implicature, provided that  $\diamond(p \vee q)$  has  $\diamond r$  as alternative.
